definitions

Technical
data

This publication, referring to the UNI, EN and ISO standards, uses the following geometrical definitions:

d_n	nominal outside diameter	specified outside diameter, in millimeters, of a PE pipe or fitting
e_n	nominal wall thickness	numerical designation of the wall thickness, in millimeters, of a PE pipe or fitting
d_e	outside diameter	external diameter, in millimeters, measured at any point of the circumference of a PE pipe or fitting
d_{em}	mean outside diameter	dimension value of the external circumference of a PE pipe/fitting divided by π , in millimeters
SDR	standard dimension ratio	relationship between the outside nominal pipe diameter d _n and the nominal wall thickness e _n
D	nominal outside diameter steel pipe	nominal outside diameter, in inches, of a steel pipe
G	gas thread diameter	dimension, in inches, of the thread part

polyethylene classification

The polyethylene classification, defined by the ISO and the EN standards is issued depending on the parameter MRS = MINIMUM REQUIRED STRENGTH, that is the minimum resistance that the polyethylene must guarantee after 50 working years at the reference temperature of 20°C.

Each MRS has a design stress value sigma (σ_s), derived by MRS dividing it with the design coefficient (C).

DESIGNATION	MPa	
	MRS	σ_s (C=1,25)
PE 80	8,0	6,3
PE 100	10,0	8,0

The choice of the polyethylene type determines the nominal pressure PN of the pipe/fitting. For water distribution corresponds to the maximum allowable operating pressure (PFA) in bar which can be borne at the temperature of 20°C with a design basis of 50 years, based on the design coefficient.

materials

All fittings in the EUROSTANDARD range are injection moulded using polyethylene compounds type PE 100 suitable for pipelines for the distribution of gas, water and other fluids under pressure.

The characteristics are in conformity with the standards EN 1555, EN 12201 and EN ISO 15494.

The compounds used, normally added at the origin with carbon black for the UV stabilization, are suitable for drinking water and foodstuffs as provided in the DM 21 March 1973 and the DM n. 174 dated 6 April 2004.

EUROSTANDARD fittings are weldable with PE 80 and 100 pipes and fittings having melt mass-flow rate 0,2 - 1,4 g/10 min (ISO 1133 5 kg - 190°C).

PE 100 fittings are weldable with PE 80 pipes/fittings and viceversa, either using buttfusion (if only of the same thickness and diameter) or using electrofusion (also with different thicknesses).

CHARACTERISTICS	TYPICAL VALUES	UNITS	TEST METHODS
Density	959	$\frac{\text{kg}}{\text{m}^3}$	ISO 1183
Melt mass-flow rate (MFR) 5 kg/190°	0,30 - 0,45	$\frac{\text{g}}{\text{10 min}}$	ISO 1133
Tensile strength at break	35	MPa	ISO 527
Tensile strength at yield	25 - 26	MPa	ISO 527
Tensile elongation at break	700	%	ISO 527
Carbon black content	2,0 - 2,5	%	ISO 6964
Linear thermal expansion coefficient	$2,0 \cdot 10^{-4}$	$\frac{\text{m}}{\text{m } ^\circ\text{C}}$	--
Brittleness temperature	-80	$^\circ\text{C}$	ASTM D746

product testings

EUROSTANDARD fittings are continuously monitored throughout the entire production process in accordance with the internal testing programs in compliance with the standards EN 1555, EN 12201 and EN ISO 15494. The testing activities are continuously carried out following up the complete observance of the reference standards and foresee tests of mechanical and physical type, either on the fittings and on the raw material.

Particularly, the production is subjected to the following tests:

- melt mass-flow rate (MFR)

 rif. UNI EN ISO 1133-1

- dimensional control – appearance test – marking control

 rif. UNI EN 1555

 UNI EN 12201

laboratory accreditation

Technical
data

The EUROLAB Laboratory, belonging to Eurostandard, operates in accordance to the standard EN ISO/IEC 17025:2005 and is accredited from ACCREDIA - Italian Accreditation Body with accreditation number LAB N° 0740.

The accreditation certifies the technical qualification of the Laboratory relatively to the testings detailed in the enclosed sheets to the certificate - download on the website www.accredia.it. The in-force status of the accreditation can be checked on the same website.

quality marking

Eurostandard is authorized to use the RINA Quality Marking with reference to the standards UNI EN 12201-3, EN 12201-3, UNI EN 1555-3, EN 1555-3, UNI 9736, UNI EN ISO 15494 for the fittings as detailed in the enclosed papers to the Conformity Certificates.

Informations concerning validity of Certificates of Conformity and certified fittings are available on website www.rina.org.

Download of Certificates of Conformity and relevant enclosures on website www.eurostandard.it.

quality system certification

QUALITÀ ED
AFFIDABILITÀ

Quality management systems - Requirements

UNI EN ISO
9001:2008

The **EUROSTANDARD QUALITY MANAGEMENT SYSTEM** involves and manages all activities within the Company in order to achieve the optimum level of the quality standards. That is on the basis of the directions imposed in the ISO 9001:2008 standard, which points out the requirements for the supplier to show its capability in checking the processes which determine the conformity of the finished product. The codified and controlled management of the company activities are described in the documents which form the **SYSTEM MANUAL** and the relative managing and technical procedures.

The **QUALITY ASSURANCE** guarantees the integration of the various activities which determine the quality of the system itself.

The correct management of all documents allows the tracing of the product through the batch reference number or other codes assigned during the production.

The Eurostandard policy is published on the website: www.eurostandard.it

environmental certification

AMBIENTE

Environmental management systems. Requirements with guidance for use.

UNI EN ISO
14001: 2004

Technical
data

The **EUROSTANDARD ENVIRONMENTAL MANAGEMENT SYSTEM** involves and manages all activities within the Company in order to render to the minimum the environmental impacts deriving from themselves and avoid pollution. This happens in conformity to the prescriptions of the standard ISO 14001, which specifies the requisites which allow to the organization to actuate a policy and establish the aims, taking also into consideration legislative prescriptions and informations relating to the affecting environmental impacts.

The management and control methodologies of the firm activities are described in details in the System Manual and in the environmental procedures.

The Eurostandard policy is published on the website: www.eurostandard.it

inspection documents

UNSIDER

Metallic products - Types of inspection documents

UNI EN
10204

Inspection documents based on non-specific inspection, carried out by the manufacturer in accordance with his own procedures to assess whether products defined by the same product specification and made by the same manufacturing process, are in compliance with the requirements of the order or not. The products inspected are not necessarily the products actually supplied.

- **Declaration of compliance with the order “type 2.1”**

Document in which the manufacturer declares that the products supplied are in compliance with the requirements of the order, without inclusion of test results.

- **Test report “type 2.2”**

Document in which the manufacturer declares that the products supplied are in compliance with the requirements of the order and in which he supplies test results based on non-specific inspection.

Inspection documents based on specific inspection carried out, before delivery, according to the product specification, on the products to be supplied or on test units of which the products supplied are part, in order to verify that these products are in compliance with the requirements of the order.

- **Inspection certificate “type 3.1”**

Document issued by the manufacturer in which he declares that the products supplied are in compliance with the requirements of the order and in which he supplies test results.

The test unit and tests to be carried out are defined by the product specification, the official regulation and corresponding rules and/or the order.

The document is validated by the manufacturer's authorized inspection representative, independent of the manufacturing department.

It shall be permissible for the manufacturer to transfer on to the inspection certificate 3.1 relevant test results obtained by specific inspection on primary or incoming products he uses, provided that the manufacturer operates traceability procedures and can provide the corresponding inspection documents required.

The inspection documents are issued only if requested at order and indicated between the contract requirements.

UNI – CEI

Conformity assessment - Supplier's declaration of conformity.
Part 1 - general requirements
Part 2 - supporting documentation

UNI CEI EN
ISO/IEC 17050

Declaration of conformity

Declaration of a supplier, under its responsibility, that a product, process or service is in compliance with a specific standard or another regulation.

This declaration must contain those information that allow the individualisation of the referring products. This must contain at least the following information:

- a) unique identification of the declaration of conformity;
- b) the name and contact address of the issuer of the declaration of conformity;

- c) the identification of the object of the declaration of conformity (e.g. name, type, date of production or model number of a product, description of a process, management system, person or body, and/or other relevant supplementary information);
- d) the statement of conformity;
- e) a complete and clear list of standards or other specified requirements, as well as the selected options, if any;
- f) the date and place of issue of the declaration of conformity;
- g) the signature (or equivalent sign of validation), name and function of the authorized person(s) acting on behalf of the issuer;
- h) any limitation on the validity of the declaration of conformity.

marking

EUROSTANDARD fittings have the following information stated on the fitting and/or on a label.

	producer identification
W14001 01/14	batch reference and/or month and year of manufacture
PN...	nominal pressure rating at 20°C for water
S...	gas series of pipe
SDR...	standard dimension ratio
d...	nominal size of the fitting (mm)
PE 100	raw material type used
UNI ... - EN ... - ISO ...	product standard
RINA	conformity marking
grado B	dimensional tolerance

The bar-code label is applied on the electrofusion fittings containing the welding parameters according to standard ISO 13950 and the traceability data of the fitting according to standard ISO 12176-4.

CLEARLY specify
the requested version

20.60A steel/PE coupling galvanized
20.60F steel/PE coupling galvanized with thread
20.60H steel/PE coupling galvanized coated with thread

Do not cut the steel part as it could origin deformations on PE collar due to overheating

Suitable for gas and water pipelines

Steel pipe according to UNI EN 10208-1 and galvanized according to UNI EN 10240 A.1 ("lead free galvanized pipe")

Coupling certified according to UNI 9736

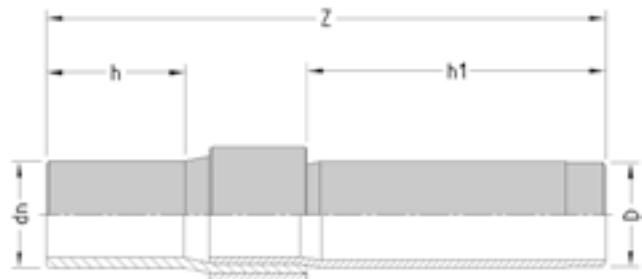

With thread and buried → inspection shaft!

On request type galvanized coated pipe for welding

Buttfusion unadvised for dia. <63 mm

Electro-fusion fittings

- ✓ Boring after cooling phase is completed
- ✓ Weldability guaranteed both on PE 80 and PE 100 pipelines
- ✓ Suitable for application on pipelines under pressure gas and water
- ✓ ABSOLUTELY compulsory the pipe scraping in the welding area
- ✓ Do not remove the cutter after boring

- ABSOLUTELY compulsory the use of aligning clamp for all diameters**
- ABSOLUTELY compulsory the pipes scraping**
- Weldability guaranteed both on PE 80 and PE 100 pipelines**

Welding units and equipment

Electro-fusion units

monovalent electrofusion units

with USB port

The monovalent control unit can only be used to weld PE e-fusion fittings from a single manufacturer. No guaranteed results can be given for any use with other fittings.

The units **EURO S1** and **EURO S1 LIGHT** are monovalent control units suitable for welding of all electrofusion fittings series "EURO" and allow the Operator to work at a welding safety voltage lower than 50 V, are manufactured according to the UNI 10566 – ISO 12176-2 regulations, are furnished with CE mark.

The heating power is automatically fixed according to the type and diameter of the e-fitting, to the SDR of the pipe/fitting to be welded and to the ambient temperature.

The units **EURO S1** and **EURO S1 LIGHT** use a switching technology which permit to be light and compact.

The display guides the Operator when setting the parameters: type of fitting to be welded – nominal diameter – SDR and consequently shows: ambient temperature, welding voltage, welding time, a progressive number of welding operations, alarm or malfunctioning messages.

The control units **EURO S1** and **EURO S1 LIGHT** are designed to store the Operator code, the work site, the date and time of electrofusion and the welding parameters.

For data transfer the units **EURO S1** and **EURO S1 LIGHT** are supplied with USB connection port and serial port.

The **software DBManager** is stored on the USB drive, permits the data transfer from the USB drive to PE and the management of the printing operations and the storage of the transferred data.

The welding unit must be submitted to periodic overhaul (biennal) according to the UNI 10566 standard.

Euro S1
cod. 12.12 S1

Euro S1 Light
cod. 12.12 S1L

CHARACTERISTICS	EURO S1	EURO S1 LIGHT
supply voltage	230V ± 15%	
frequency	50 Hz ± 15%	
output voltage	< 50V	
max power consumption	4500 W	3000 W
operating temperature	-10°C + 45°C	
port connections	USB serial RS-232	
protection	IP 54	
welding cycle memory capacity	n. 1600	n. 800
dimensions LxPxH	36x21x31 cm	35x19x30 cm
weldable diameters	the complete electrofusion EUROSTANDARD range	electrofusion sockets and fitting d. 20-160 ef saddles d. 40x - 250x
weight	14 Kg	8 Kg

Electro-fusion units

polyvalent electrofusion unit

with USB port

The ef unit **EURO SP1** is an universal machine for the welding of electrofusion fittings with welding safety voltage lower than 50 Volt, manufactured according to UNI 10566 and ISO 12176-2 and is furnished with CE mark. The ef unit can work in automatic through the welding bar code reading and traceability by means of a scanner, or in manual system by setting of welding voltage and relative time.

As for the ef units EURO S1 and S1 Light, the **EURO SP1** unit uses the switching technology which permits to be light and compact. The display and the four buttons guide the operator in all operative settings.

The scanner device for the bar code reading allows the maximum operative ease in all site conditions. The serial ports RS-232 and USB allow an easy and flexible management of the welding data stored in the internal memory of the ef unit.

The **software DBManager** is stored on the USB drive, permits the data transfer from the USB drive to PC and the management of the printing operations and the storage of the transferred data.

The welding unit must be submitted to periodic overhaul (biennal) according to the UNI 10566 standard.

Euro SP1
cod. 12.19 SP1

CHARACTERISTICS	EURO SP1
supply voltage	230 V +/-15%
frequency	50 Hz +/-15%
output voltage	8 ÷ 48V
max output current	110 Amp
60% output current	80 Amp
max power consumption	4500 W
operating temperature	-10° C + 45° C
port connections	USB - serial RS-232
protection	IP 54
working range	20 ÷ 710 mm
working modes	bar code reading and manual setting
bar codes for ef welding according to ISO 13950	ef welding Interleaved 2.5/24 digit
bar codes traceability ISO 12176/3/4	operator - Interleaved 2.5 / 30 digit Interleaved 2.5 / 30 digit traceability 128 /26/40 digit
bar code reading system	scanner
manual system	setting: time and voltage or 24 digit sequence of bar code
welding cycle memory capacity	n. 1600
connectors	4.0 mm
ancillary connectors	4.7 mm
dimensions L x P x H	32 x 26 x 31 cm
weight	kg 14,0
ancillary equipment on request	GPS

welding bar code

The bar code is an universally recognized system to store up information and to allow their reading by proper systems such as scanner or light pen.

For the electrofusion system of polyethylene, the **BAR CODE type INTERLEAVED “2-in-5”** with 24 digits with control character according to standard ISO 13950.

The information stored in the code, and carried on the label, allow the suitable control unit to understand automatically the characteristics of the fitting to be welded and to consequently work.

The code stores all information necessary for the electrofusion cycle: type of fitting, diameter, fusion time and cooling time, control character of a correct reading, identification key.

The main characteristic of this system is to avoid any possibility of errors in the fixing from the operator, who must only acquire the data from the bar code and confirm manually the correct reading.

The guarantee of correct code reading is determined from the control character carried on the label. Possible differences between the fitting connected to the control unit and the wrong reading of the code are shown on the display, which does not proceed in the memorized sequence.

traceability bar code

It is an universally recognized system for “tracing” the information relative to the fitting and pipes welded (manufacturer, type of fitting, batch, raw material, production site, etc). All these information are stored in the **BAR CODE LABEL type CODE 128** with 26 digits with control character according to standard ISO 12176-4.

The reading of the bar code with optical pen/scanner on universal units allow to store all traceability data inside the ef unit and the subsequent transfer to PC, obtaining a complete traceability of the welding operations of the fittings.

Electro-fusion units

aligning clamp

- Protects the jointing, either during the electrofusion or the subsequent cooling, from external mechanical stresses
- Allows to revise possible off-centering between both ends to be welded and to recover the out-of-round of parts, if ovalized.

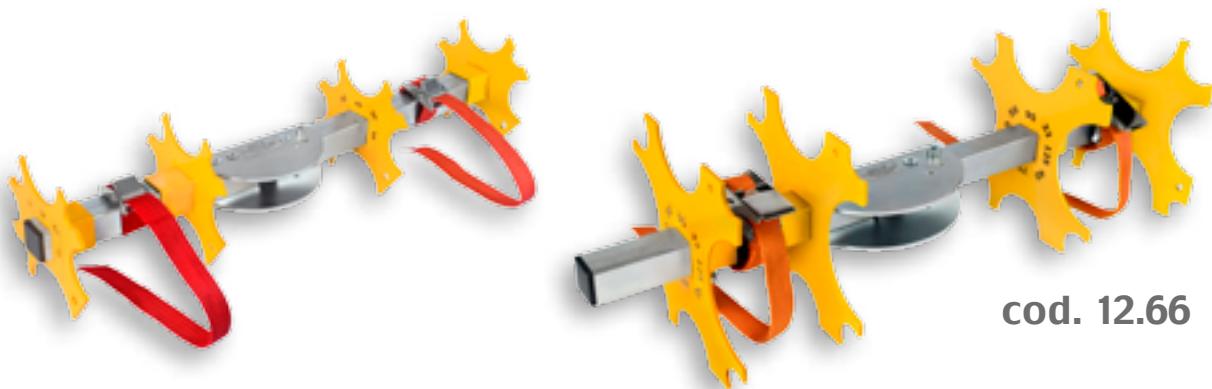

The aligning clamp is auxiliary to the control unit, its use is essential for the successful electrofusion jointing.

The clamp consists of a support frame with four jaws and reducing inserts to adapt the unit to the various diameters and fittings used.

Simultaneous use of multiple aligning clamps will positively affect the speed of installation.

Equipment

pipe cutter

A square cut of the pipe to be welded is carried by means of a pipe cutter, type with roller or with tool; choosing the type, it is important to verify the diameter according to the wall thickness of the pipe to be cut.

cod. 15.39/40/41

pipe scraper

For the removal of the oxide layer on pipes/fittings are used manual scrapers with straight interchangeable blade and pipe scrapers, type mechanical which are fastened on the pipe end.

The use of this equipment means the perfect flatness of the pipe end, which is only achieved with the pipe cutter.

Equipment

detergent PE cleaner

Special detergent for polyethylene (PE) and polypropylene (PP) weldings.

chemical feature	mixture of aliphatic solvents
packing	no. 8 plastic bottles of 1 liter each
specific weight	about 0,7 g/cm ³

Detergent suitable for electrofusion system according to UNI 10521

buttfusion welding units

The buttfusion welding unit is conform according to the UNI 10565 standard, has the CE marking and guarantees:

- a correct axial adjustment/movement of the pipes through the clamps;
- a proper and true facing of the pipes/fittings through the facer tool;
- an accurate control of the welding pressure and of the temperature of the heating plate;
- the conformity to the safety standard regulations.

Each machine can butt-weld different diameters; according to the pipe diameter, the reducing insert are fitted into the standard clamps.

The buttfusion machine consists of a supporting mounting with fixed and movable clamps. Those movable, hydraulically driven with manual or electrical control, are rolling on two guides.

The machine is provided with an electrical facer tool, an electrically heating plate, an electro-hydraulic unit with distributor and pressure gauge with manometer.

The heating plate guarantees uniform temperature on its whole surface.

The temperature control is carried out with an adjustable thermostat which guarantees a maximal variation of $\pm 2^{\circ}\text{C}$ of the stated temperature.

The welding unit must be submitted to periodic overhaul (biennal) according to the UNI 10565 standard.
